DISTRIBUTION STATEMENT A.

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED.

Case Number: 88ABW-2018-1538

Motivation

The AFIT of Today is the Air Force of Tomorrow.

- Cyber-Physical Complex Systems are vulnerable
 - Current cybersecurity approaches are limited in effectiveness and usability
- Legacy weapons systems are not designed for cyber threats or cyber resiliency
- DoD and Congressional Mandates: NDAA Sec 1647– Requirement and funding to access major weapon systems
- U. S. Air Force Cyber Resiliency Office for Weapons Systems (CROWS)
 - Air Force Cyber Campaign Plan
 - “Bake in” for new acquisitions,
 - Mitigate critical vulnerabilities in fielded systems
 - LOA 3: Recruit, Hire, and **TRAIN** workforce

Research Objectives

The AFIT of Today is the Air Force of Tomorrow.

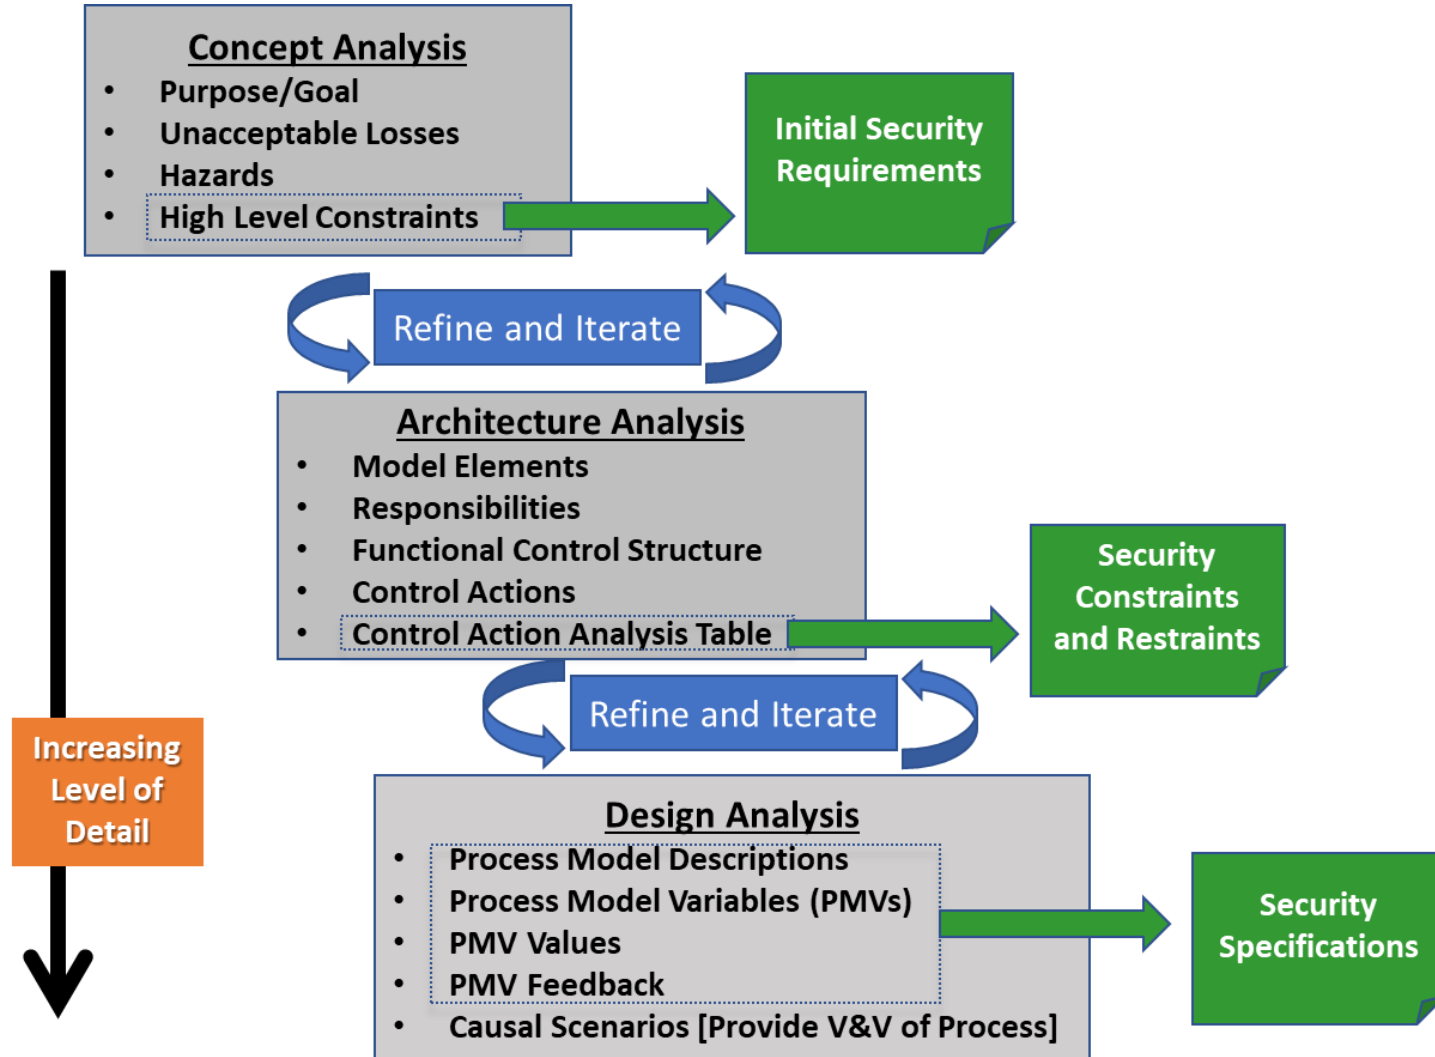

- How can STPA-Sec be tailored to enable the development of security requirements and design criteria?
- How executable is STPA-Sec for USAF warfighting Systems?
- What recommendations can be made to increase the utility and ease the use of STPA-Sec?

STPA-Sec Tailored Approach

The AFIT of Today is the Air Force of Tomorrow.

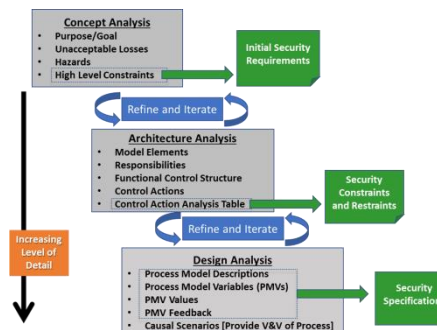

Mapping to NIST SP 800-160 Processes

The AFIT of Today is the Air Force of Tomorrow.

STPA-Sec Phases			
	Concept Analysis	Architectural Analysis	Design Analysis
Purpose	Determine Initial Security Requirements	Determine "Design-To" Constraints and Restraints	Determine "Build-To" Criteria
NIST 800-160 SSE Processes	<ul style="list-style-type: none"> BA - Business Analysis SN - Stakeholder Needs SA - Systems Analysis 	<ul style="list-style-type: none"> SR - System Requirements Definition AR - Architectural Definition SA - Systems Analysis 	<ul style="list-style-type: none"> DE - Design Definition SA - Systems Analysis

Phase 1: Conceptual Analysis

The AFIT of Today is the Air Force of Tomorrow.

Purpose	A System to	Provide worldwide aerial refueling
Method	By Means of	Flying, Refueling, and Mission Planning
Goal	In order to	Enable the Air Force Mission to meet Joint Capability Areas via refueling and airlift: Force Enable, Force Extend, Force Multiply

Hazard to Loss Cross Walk Table		L1 Death or Human injury	L2 Damage to or loss of aircraft	L3 Unable to Complete Mission
H1	Flying to Close to other aircraft/out of position	X	X	X
H2	Violation of Altitude/clearance from terrain	X	X	X
H3	Unable to evade enemy threats	X	X	X
H4	Msn critical systems not functional when required			X

Initial Security Constraints		Hazard Mapped to
1	A/C must maintain minimum safe separation distance	H1
2	Must have minimum mission critical safety systems functional to attempt AR	H1
3	A/C must maintain minimum safe altitude limits	H2
4	Must have minimum mission critical safety systems functional for terrain flight	H2
5	Must maintain integrity of mission critical warning and deterrence systems	H3
6	Msn critical systems must be available when required to perform primary msn	H4

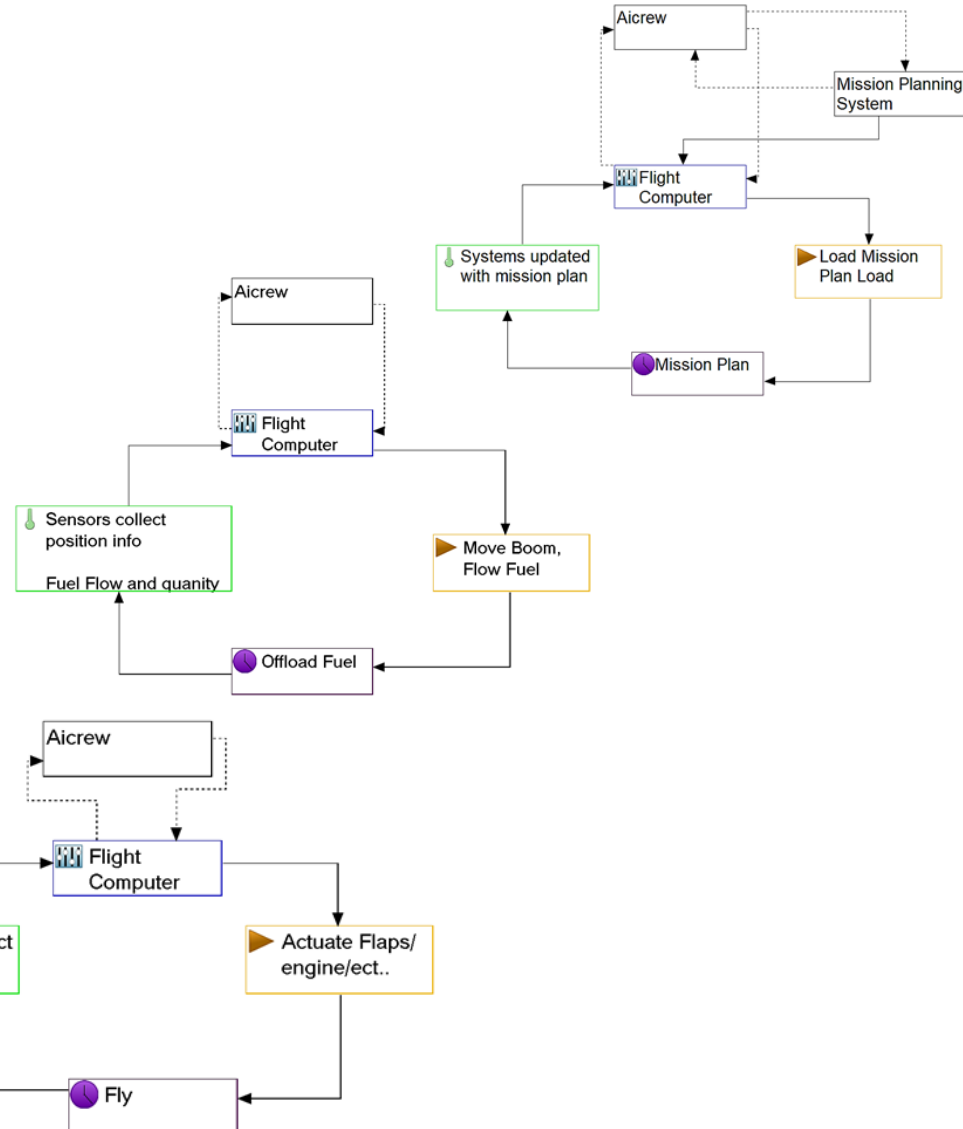

Initial Security Requirements

```

Figure 1 illustrates the iterative process of developing a preliminary design specification. The process begins with **Concept Analysis**, which includes Purpose/Goals, Unstructured Issues, Hazards, and High Level Constraints. This leads to **Initial Security Requirements**. A feedback loop labeled **Refine and Iterate** connects the requirements back to the analysis. The next step is **Architecture Analysis**, which includes Model Elements, Responsibilities, Functional Control Structure, Control Actions, and Common Action Analysis Table. This leads to **Refined Security Requirements**. Another feedback loop labeled **Refine and Iterate** connects the refined requirements back to the architecture analysis. The final step is **Design Analysis**, which includes Process Model Descriptions, Process Model Variables (Phenon), PMV Values, PMV Feedback, and Casual Scenarios (Provide V&V of Process). This leads to the final output, **Preliminary Design Specs**. A vertical arrow on the left indicates an **Increase Level of Detail** from top to bottom.

Architectural Analysis Control Actions

The AFIT of Today is the Air Force of Tomorrow.

KC-X CONTROL ACTIONS			
Control Action	Activity	Performer	Description
1. Position Mx	Fly	Aircrew/ Computer	Adjust position- heading change, takeoff, land, climb, descend. Computer included for autopilot functions
2. Velocity Mx	Fly	Aircrew/ Computer	Change Velocity- accelerate, decelerate, climb, descend. Computer included for autopilot functions
3. Communicate	Fly	Aircrew/ Computer	Radio and digital(i.e. ACARS, IFF) to other A/C , ATC and ground assets. Access and communicate in net centric environment.
4. Precontact	Offload Fuel	Aircrew/ Computer	Instructing both crews on proper position to begin AR. Solution independent to allow for human direction or computer aided position information
5. Contact	Offload Fuel	Aircrew/ Computer	Receiver connected to begin refueling. Solution Independent of human vs. computer to allow automation as desired
6. Breakaway	Offload Fuel	Aircrew/ Computer	Command to disengage either when complete or in case of emergency. Solution Independent of human vs. computer to allow automation as desired
7. Prepare OPS	Mission Plan	Aircrew/ external mission planning system	Reviews mission tasking, intel, and weather. Interacts with external mission planning system to create mission plan file
8. Distribute OPS	Mission Plan	Aircrew/ Computer	Aircrew inserts cartridge into jet, also provides crew briefings and coordination for mission plan. Computer distributes mission plan files to A/C systems

Architectural Analysis Control Action Analysis Table

The AFIT of Today is the Air Force of Tomorrow.

KC-X CONTROL ACTION ANALYSIS TABLE.

CA#	Control Action	Not providing causes Hazard	Providing Causes Hazard	Too Early/too late, wrong order	Stopping too soon/applying too long
1	Position Mx (Aircrew)	Not Providing Position MX is Hazardous if in a critical phase of flight [H1, H2, H3]		Position MX is Hazardous if done too early or too late in a critical phase of flight [H1, H2, H3]	Position MX is Hazardous if stopped too soon or applied too long in a critical phase of flight [H1, H2, H3]
2	Velocity Mx	Not Providing Velocity MX is Hazardous if in a critical phase of flight [H1, H2, H3]		Velocity MX is Hazardous if done too early or too late in a critical phase of flight [H1, H2, H3]	Velocity MX is Hazardous if stopped too soon or applied too long in a critical phase of flight [H1, H2, H3]
3	Communicate	Not Providing Communication is Hazardous if in a critical phase of flight(takeoff, landing, joining refueler) [H1, H3]		Communication too late is Hazardous if in a critical phase of flight(takeoff, landing, joining refueler) [H1, H3]	Communication stopped too soon (clipped transmission) is Hazardous if in a critical phase of flight [H1, H3]
4	Precontact	Not Providing Precontact is Hazardous as a A/C could be out of position and damage equipment [H1,H4]		The wrong sequence for Precontact is Hazardous if in a critical phase of refueling setup [H1,H4]	
5	Contact		Providing Contact is hazardous if attempted during an unsafe position [H1]	Providing Contact out of sequence is hazardous if attempted during an unsafe position [H1]	
6	Breakaway	Not providing Breakaway is hazardous if unsafe position occurs [H1]		Not providing Breakaway on time is hazardous if unsafe position occurs [H1]	
7	Prepare OPS	Not providing Prepare OPS is hazardous in almost all scenarios (no planned route, no deconflicts, no mission plan loaded on systems...) [H1,H2,H3,H4]			
8	Distribute OPS	Not providing Distribute OPS is hazardous in almost all scenarios (no filed flight plan, no crew briefing, no mission plan loaded on systems...) [H1,H2,H3,H4]	Providing Distribute OPS is hazardous when malware or intentionally incorrect information is distributed to systems [H1,H2,H3,H4]

The flowchart illustrates an iterative process for system analysis, starting with Concept Analysis and ending with Preliminary Design Specs. The process involves multiple cycles of refining and iterating between security requirements and architectural analysis. A vertical arrow on the left indicates an increasing level of detail throughout the process.

Concept Analysis

- Purpose/Goal
- Unacceptable Losses
- Hazards
- High Level Constraints

Initial Security Requirements

Refine and Iterate

Architecture Analysis

- Model Elements
- Responsibilities
- Functional Control Structure
- Control Actions
- Control Action Analysis Table

Refined Security Requirements

Refine and Iterate

Design Analysis

- Process Model Descriptions
- Process Model Variables (PMVs)
- PMV Values
- PMV Feedback
- Causal Scenarios (Provide V&V of Process)

Preliminary Design Specs

Increasing Level of Detail

Security Constraints and Restraints – Output of Architectural Analysis

Air University: The Intellectual and Leadership Center of the Air Force
Aim High ... Fly-Fight-Win

Phase 3: Design Analysis

The AFIT of Today is the Air Force of Tomorrow.

PROCESS MODEL DESCRIPTIONS				
Control Action	Key Activity	Process Model Description / Decision Logic		
1. Position Mx	Fly	Execute Position Mx during critical phases of flight		
2. Velocity Mx	Fly	Execute Velocity Mx during critical phases of flight		
6. Breakaway	Refuel	Issue Breakaway when unsafe position		

FULL PROCESS MODEL DESCRIPTION				
CA	Process Model Description	Process Model Variables	Process Model Variable Values	Feedback Information
Breakaway	Issue Breakaway when unsafe position	Separation Distance	In bounds, out of bounds, unknown	Altimeter warning, proximity warning, eyeball

- Causal Scenario – Breakaway
 - Turbulence, out of position, poor refueler maneuvering, engine malfunction, ect.
 - In Bounds, Out of Bound, or Unknown

Results

The AFIT of Today is the Air Force of Tomorrow.

- Conceptual Analysis STPA-Sec is executable on USAF warfighting systems
- This work provides widely distributable STPA-Sec reference and detailed example of a USAF aircraft case study
 - Presents a tailorable approach for execution
 - Provides a detailed example and recommendations to help the practitioner (a non-PhD) perform STPA-Sec
- Subjective utility assessment is below:

	Concept Analysis	Architectural Analysis	Design Analysis
Purpose	Determine Security Requirements	Determine Design-To Criteria	Determine Build-To Criteria
Difficulty	Easy	Moderate	Moderate-High
Level of Domain Expertise Req'd	Novice	Advanced	Expert
Level of STPA Expertise Req'd	Low	High	Moderate
Amount of STPA instructional materials available	Numerous	Some	Few
Duration	Hours	Days	Weeks
Number of Steps	4 Steps	5 Steps	5 Steps
